APPLICATION FOR AMENDMENT OF WASTE MANAGEMENT PERMIT PE-4608

THIS APPLICATION is to be filed with the Regional Waste Manager, Waste Management Branch, Lower Mainland Region, 15326—103A Avenue, Surrey, B.C. V3R 7A2.

Any person who may be affected by the amendment to Permit PE-4608 described below may, within 30 days from the date of posting, publication, service or display, state in writing to the Manager how he is affected.

Preamble—The purpose of this application is to raise the allowable temperature of the combined cooling water and overflow from the water supply to 32°C.

A. M. Ford, Ch.Eng. (Abbotsford Division), Fraser Valley Milk Producers Cooperative Association, hereby applies for amendments, as described below, to Waste Management Permit PE-4608, granted on April 1, 1977, which authorized the discharge of effluent (cooling water) from evaporated milk plant located at Abbotsford, B.C., to an unnamed tributary of Marshal Creek.

AMENDMENTS REQUESTED

The existing permit parameters of 500,000 imperial gallons of uncontaminated cooling water at a maximum temperature of 34°C discharging into the overflow from the water supply, resulting in a combined temperature with a maximum temperature of 15°C be changed to 500,000 imperial gallons of uncontaminated cooling water at a maximum temperature of 34°C discharging into the overflow from the water supply, resulting in a combined temperature of 32°C.

The existing allowable temperature of 15°C for the combined flow has proven by our records unworkable. The supply source temperature is between 12 to 13°C and when 80% of this flow is diverted through the evaporator plant as cooling water and then returned to the overflow at 31°C (maximum recorded); 15°C for the combined waters is unrealistic and for the above-stated reasons this amendment is being made.

This application, dated on November 16, 1983, was posted on the ground in accordance with the Waste Management Regulations.
